Doctrine

database storage and object mapping

```php
#[ORM\Entity]

#[ORM\Table(name: 'products')]

class Product

{

    #[ORM\Id]

    #[ORM\Column(type: 'integer')]

    private int|null $id = null;

    #[ORM\Column(type: 'string')]

    private string $name;
```

PHPUnit

https://docs.phpunit.de/en/11.5/attributes.html

- #[Test] - That method is a test to be run

- #[TestDox('Hold my beer, PHP Bergen tests is running')]
